

Python Programs – Q1 to Q30

Answers written using basic Python concepts for an online Python compiler.

Q1. Hello Python

```
print("Welcome to Python")
```

Q2. Personal Introduction

```
print("Name: Archana")
print("Age: 20")
print("College: ABC Engineering College")
print("Department: CSE")
```

Q3. Store Your Name

```
name = "Archana"
print(name)
```

Q4. Student Information Using Variables

```
student_name = "Archana"
age = 20
city = "Chennai"
college = "ABC Engineering College"
print("Student Name:", student_name)
print("Age:", age)
print("City:", city)
print("College:", college)
```

Q5. Different Data Types

```
integer_value = 10
float_value = 85.5
string_value = "Python"
boolean_value = True
print(integer_value)
print(float_value)
print(string_value)
print(boolean_value)
```

Q6. Find the Datatype

```
age = 21
print(type(age))
```

Q7. Identify Multiple Datatypes

```
name = "Archana"
age = 20
percentage = 85.5
is_student = True
print(name, type(name))
print(age, type(age))
print(percentage, type(percentage))
print(is_student, type(is_student))
```

Q8. Get User Name

```
name = input("Enter your name: ")
print("Hello", name)
```

Q9. Get User Age

```
age = int(input("Enter your age: "))
print("Age:", age)
```

Q10. Get Percentage

```
percentage = float(input("Enter your percentage: "))  
print("Percentage:", percentage)  
print("Datatype:", type(percentage))
```

Q11. Student Basic Information

```
name=input("Name: ")
age=int(input("Age: "))
department=input("Department: ")
cgpa=float(input("CGPA: "))
print("Name:", name)
print("Age:", age)
print("Department:", department)
print("CGPA:", cgpa)
```

Q12. Employee Information

```
employee_name=input("Employee Name: ")
employee_id=input("Employee ID: ")
age=int(input("Age: "))
salary=float(input("Salary: "))
experience=float(input("Experience: "))
print("Employee Name:", employee_name)
print("Employee ID:", employee_id)
print("Age:", age)
print("Salary:", salary)
print("Experience:", experience)
```

Q13. Product Details

```
product_name=input("Product Name: ")
product_code=input("Product Code: ")
price=float(input("Price: "))
weight=float(input("Weight: "))
print("Product Name:", product_name)
print("Product Code:", product_code)
print("Price:", price)
print("Weight:", weight)
```

Q14. Student Registration

```
student_name=input("Student Name: ")
register_number=input("Register Number: ")
age=int(input("Age: "))
cgpa=float(input("CGPA: "))
email=input("Email: ")
print("Student Name:", student_name)
print("Register Number:", register_number)
print("Age:", age)
print("CGPA:", cgpa)
print("Email:", email)
```

Q15. Employee Profile System

```
full_name=input("Full Name: ")
employee_id=input("Employee ID: ")
age=int(input("Age: "))
department=input("Department: ")
designation=input("Designation: ")
experience=float(input("Experience: "))
salary=float(input("Salary: "))
email=input("Email: ")
print("Full Name:", full_name)
print("Employee ID:", employee_id)
print("Age:", age)
print("Department:", department)
print("Designation:", designation)
print("Experience:", experience)
print("Salary:", salary)
print("Email:", email)
```

Q16. Bank Account Details

```
customer_name=input("Customer Name: ")
```

```

account_number=input("Account Number: ")
account_type=input("Account Type: ")
age=int(input("Age: "))
initial_balance=float(input("Initial Balance: "))
nominee_name=input("Nominee Name: ")
print("Customer Name:",customer_name)
print("Account Number:",account_number)
print("Account Type:",account_type)
print("Age:",age)
print("Initial Balance:",initial_balance)
print("Nominee Name:",nominee_name)

```

Q17. College Admission Form

```

student_name=input("Student Name: ")
application_number=input("Application Number: ")
date_of_birth=input("Date of Birth: ")
age=int(input("Age: "))
department=input("Department: ")
percentage=float(input("Percentage: "))
email=input("Email: ")
phone_number=input("Phone Number: ")
print("Student Name:",student_name)
print("Application Number:",application_number)
print("Date of Birth:",date_of_birth)
print("Age:",age)
print("Department:",department)
print("Percentage:",percentage)
print("Email:",email)
print("Phone Number:",phone_number)

```

Q18. Job Application Form

```

candidate_name=input("Candidate Name: ")
candidate_id=input("Candidate ID: ")
qualification=input("Qualification: ")
age=int(input("Age: "))
experience=float(input("Experience: "))
expected_salary=float(input("Expected Salary: "))
email=input("Email: ")
phone_number=input("Phone Number: ")
city=input("City: ")
print("Candidate Name:",candidate_name)
print("Candidate ID:",candidate_id)
print("Qualification:",qualification)
print("Age:",age)
print("Experience:",experience)
print("Expected Salary:",expected_salary)
print("Email:",email)
print("Phone Number:",phone_number)
print("City:",city)

```

Q19. Mobile Phone Specification System

```

brand=input("Brand: ")
model=input("Model: ")
ram=int(input("RAM: "))
storage=int(input("Storage: "))
display_size=float(input("Display Size: "))
price=float(input("Price: "))
five_g_support=input("5G Support (True/False): ")
print("Brand:",brand)
print("Model:",model)
print("RAM:",ram)
print("Storage:",storage)
print("Display Size:",display_size)
print("Price:",price)
print("5G Support:",five_g_support)

```

Q20. Complete Employee Onboarding System

```
full_name=input("Full Name: ")
age=int(input("Age: "))
date_of_birth=input("Date of Birth: ")
gender=input("Gender: ")
employee_id=input("Employee ID: ")
department=input("Department: ")
designation=input("Designation: ")
experience=float(input("Experience: "))
joining_date=input("Joining Date: ")
basic_salary=float(input("Basic Salary: "))
bonus_percentage=float(input("Bonus Percentage: "))
email=input("Email: ")
phone_number=input("Phone Number: ")
city=input("City: ")
work_from_home=input("Work From Home (True/False): ")
laptop_assigned=input("Laptop Assigned (True/False): ")
print("----- EMPLOYEE ONBOARDING -----")
print("Full Name:",full_name)
print("Age:",age)
print("Date of Birth:",date_of_birth)
print("Gender:",gender)
print("Employee ID:",employee_id)
print("Department:",department)
print("Designation:",designation)
print("Experience:",experience)
print("Joining Date:",joining_date)
print("Basic Salary:",basic_salary)
print("Bonus Percentage:",bonus_percentage)
print("Email:",email)
print("Phone Number:",phone_number)
print("City:",city)
print("Work From Home:",work_from_home)
print("Laptop Assigned:",laptop_assigned)
```

Q21. Smart Classroom Registration System

```
student_name=input("Student Name: ")
register_number=input("Register Number: ")
year=int(input("Year: "))
section=input("Section: ")
department=input("Department: ")
attendance_percentage=float(input("Attendance Percentage: "))
lab_required=input("Lab Required (True/False): ")
classroom_number=int(input("Classroom Number: "))
print("----- CLASSROOM REGISTRATION -----")
print("Student Name:", student_name)
print("Register Number:", register_number)
print("Year:", year)
print("Section:", section)
print("Department:", department)
print("Attendance Percentage:", attendance_percentage)
print("Lab Required:", lab_required)
print("Classroom Number:", classroom_number)
```

Q22. Digital Library Book Issue System

```
member_name=input("Member Name: ")
member_id=input("Member ID: ")
book_title=input("Book Title: ")
book_id=input("Book ID: ")
author_name=input("Author Name: ")
number_of_pages=int(input("Number of Pages: "))
issue_date=input("Issue Date: ")
ebook_available=input("E-Book Available (True/False): ")
print("----- LIBRARY ISSUE RECEIPT -----")
print("Member Name:", member_name)
print("Member ID:", member_id)
print("Book Title:", book_title)
print("Book ID:", book_id)
print("Author Name:", author_name)
print("Number of Pages:", number_of_pages)
print("Issue Date:", issue_date)
print("E-Book Available:", ebook_available)
```

Q23. Food Delivery Order Profile

```
customer_name=input("Customer Name: ")
order_id=input("Order ID: ")
restaurant_name=input("Restaurant Name: ")
food_item=input("Food Item: ")
quantity=int(input("Quantity: "))
delivery_address=input("Delivery Address: ")
payment_mode=input("Payment Mode: ")
delivery_required=input("Delivery Required (True/False): ")
print("----- ORDER PROFILE -----")
print("Customer Name:", customer_name)
print("Order ID:", order_id)
print("Restaurant Name:", restaurant_name)
print("Food Item:", food_item)
print("Quantity:", quantity)
print("Delivery Address:", delivery_address)
print("Payment Mode:", payment_mode)
print("Delivery Required:", delivery_required)
```

Q24. Internship Application Profile

```
candidate_name=input("Candidate Name: ")
application_id=input("Application ID: ")
college_name=input("College Name: ")
degree=input("Degree: ")
specialization=input("Specialization: ")
current_year=int(input("Current Year: "))
cgpa=float(input("CGPA: "))
```

```

internship_mode=input("Internship Mode: ")
duration_in_months=int(input("Duration in Months: "))
resume_submitted=input("Resume Submitted (True/False): ")
print("----- INTERNSHIP APPLICATION -----")
print("Candidate Name:",candidate_name)
print("Application ID:",application_id)
print("College Name:",college_name)
print("Degree:",degree)
print("Specialization:",specialization)
print("Current Year:",current_year)
print("CGPA:",cgpa)
print("Internship Mode:",internship_mode)
print("Duration in Months:",duration_in_months)
print("Resume Submitted:",resume_submitted)

```

Q25. Smart Parking Registration

```

driver_name=input("Driver Name: ")
vehicle_number=input("Vehicle Number: ")
vehicle_type=input("Vehicle Type: ")
parking_slot=input("Parking Slot: ")
entry_time=input("Entry Time: ")
parking_floor=int(input("Parking Floor: "))
number_of_passengers=int(input("Number of Passengers: "))
monthly_pass=input("Monthly Pass (True/False): ")
print("----- SMART PARKING -----")
print("Driver Name:",driver_name)
print("Vehicle Number:",vehicle_number)
print("Vehicle Type:",vehicle_type)
print("Parking Slot:",parking_slot)
print("Entry Time:",entry_time)
print("Parking Floor:",parking_floor)
print("Number of Passengers:",number_of_passengers)
print("Monthly Pass:",monthly_pass)

```

Q26. Online Exam Registration System

```

student_name=input("Student Name: ")
exam_id=input("Exam ID: ")
subject=input("Subject: ")
register_number=input("Register Number: ")
college_name=input("College Name: ")
exam_date=input("Exam Date: ")
exam_duration=int(input("Exam Duration: "))
online_mode=input("Online Mode (True/False): ")
hall_ticket_number=input("Hall Ticket Number: ")
print("----- ONLINE EXAM REGISTRATION -----")
print("Student Name:",student_name)
print("Exam ID:",exam_id)
print("Subject:",subject)
print("Register Number:",register_number)
print("College Name:",college_name)
print("Exam Date:",exam_date)
print("Exam Duration:",exam_duration,"minutes")
print("Online Mode:",online_mode)
print("Hall Ticket Number:",hall_ticket_number)

```

Q27. Employee Asset Allocation Form

```

employee_name=input("Employee Name: ")
employee_id=input("Employee ID: ")
department=input("Department: ")
laptop_brand=input("Laptop Brand: ")
laptop_model=input("Laptop Model: ")
asset_id=input("Asset ID: ")
ram=int(input("RAM: "))
storage=int(input("Storage: "))
laptop_assigned=input("Laptop Assigned (True/False): ")
print("----- ASSET ALLOCATION -----")

```

```

print("Employee Name:", employee_name)
print("Employee ID:", employee_id)
print("Department:", department)
print("Laptop Brand:", laptop_brand)
print("Laptop Model:", laptop_model)
print("Asset ID:", asset_id)
print("RAM:", ram, "GB")
print("Storage:", storage, "GB")
print("Laptop Assigned:", laptop_assigned)

```

Q28. Hotel Check-In Registration

```

guest_name=input("Guest Name: ")
booking_id=input("Booking ID: ")
room_number=int(input("Room Number: "))
room_type=input("Room Type: ")
number_of_guests=int(input("Number of Guests: "))
check_in_date=input("Check-In Date: ")
check_out_date=input("Check-Out Date: ")
breakfast_included=input("Breakfast Included (True/False): ")
payment_mode=input("Payment Mode: ")
print("----- HOTEL CHECK-IN -----")
print("Guest Name:", guest_name)
print("Booking ID:", booking_id)
print("Room Number:", room_number)
print("Room Type:", room_type)
print("Number of Guests:", number_of_guests)
print("Check-In Date:", check_in_date)
print("Check-Out Date:", check_out_date)
print("Breakfast Included:", breakfast_included)
print("Payment Mode:", payment_mode)

```

Q29. Tech Conference Registration

```

participant_name=input("Participant Name: ")
registration_id=input("Registration ID: ")
organization=input("Organization: ")
job_role=input("Job Role: ")
experience_in_years=float(input("Experience in Years: "))
ticket_type=input("Ticket Type: ")
conference_date=input("Conference Date: ")
workshop_selected=input("Workshop Selected: ")
email=input("Email: ")
print("----- TECH CONFERENCE BADGE -----")
print("Participant Name:", participant_name)
print("Registration ID:", registration_id)
print("Organization:", organization)
print("Job Role:", job_role)
print("Experience in Years:", experience_in_years)
print("Ticket Type:", ticket_type)
print("Conference Date:", conference_date)
print("Workshop Selected:", workshop_selected)
print("Email:", email)

```

Q30. IoT Device Registration System

```

customer_name=input("Customer Name: ")
device_id=input("Device ID: ")
device_name=input("Device Name: ")
device_type=input("Device Type: ")
location=input("Location: ")
wifi_enabled=input("Wi-Fi Enabled (True/False): ")
installation_date=input("Installation Date: ")
device_version=input("Device Version: ")
warranty_period=int(input("Warranty Period in Years: "))
device_active=input("Device Active (True/False): ")
print("----- IoT DEVICE REGISTRATION -----")
print("Customer Name:", customer_name)
print("Device ID:", device_id)

```

```
print("Device Name:", device_name)
print("Device Type:", device_type)
print("Location:", location)
print("Wi-Fi Enabled:", wifi_enabled)
print("Installation Date:", installation_date)
print("Device Version:", device_version)
print("Warranty Period in Years:", warranty_period)
print("Device Active:", device_active)
```
